

ALC-PROOF-GHK-CU-100-49 · Rev 1

Catalog reference: ghk-cu-100

Search code: ALC-PROOF-GHK-CU-100-49

Received: 2026-09-28

Analyzed: 2026-09-29

Reported: 2026-09-30

Lot: SYN-00049

Sample Summary

Product: GHK-Cu - 100 mg

Principal peak purity: 99.15 % (area)

Identity evidence: Not established by this report

Net content: 100.632 mg

Molecular formula: C14H22CuN6O4 (reference)

Neutral mass: 401.09985 Da (monoisotopic; calculated)

Appearance: Lyophilized material

Chemical reference: [PubChem CID 165429100](#)

Analytical Results

Review required

Profile profile-ghk-cu-100 v1.

Determination / method	Result	Specification	Decision
Principal peak purity HPLC-01 · area basis Peak area percent. This is not a mass fraction.	99.15 % U = 0.08 %, k = 2	98 to 100 %	Pass simple
Net content QNT-01 · mass basis Specification applies to the declared label claim.	100.632 mg U = 1.5 mg, k = 2	90 to 110 mg	Pass guard-band

Methods: Quantitative assay; RP-HPLC with UV detection. Conditions, limits and calculated checks are included in the supporting pages.

Results apply only to the submitted sample and the methods listed in this report. Only the listed methods are covered. This report does not establish sterility, endotoxin content, biological activity or suitability for clinical use.

Integrated peak	Area (detector unit x min)	Area %
Principal peak	222.76305	99.15
Early impurity	1.23248	0.55
Late impurity	0.67118	0.30

Calculated checks and system suitability			
Analysis check	Value	Configured criterion	Assessment
Principal peak purity	99.15 % area	Minimum 98; caution below 99	pass
Assay relative to label claim	100.632 %	90 to 110	pass
Total integrated impurities	0.8473 % area	Maximum 2	pass
Largest integrated impurity	0.5486 % area	Maximum 1.5	pass
Retention time	9.44 min	9.44 +/- 0.2	pass
Principal peak width at half height	0.2464 min	0.2462 +/- 30%	pass
Theoretical plates	8131	Minimum 2000	pass
Resolution to Early impurity	3.782	Minimum 1.5	pass
Resolution to Late impurity	3.851	Minimum 1.5	pass
Tailing factor at 5% height	1	Maximum 2	pass
Principal signal to baseline noise	19804.3	Minimum 50	pass
Calibration R squared	0.999998	Minimum 0.995	pass
Independent QC bias	-0.105 %	Absolute maximum 5	pass
Calibration-derived content	100.632 mg	Agrees with reported content within uncertainty	informational

Assessment observations

WARNING · impurity-detected

Early impurity: 0.549% area meets the configured impurity reporting threshold 0.05%.

WARNING · impurity-detected

Late impurity: 0.299% area meets the configured impurity reporting threshold 0.05%.

Methods and decision rules

QNT-01 · Quantitative assay 1

Instrument: analytical balance

Calibration and replicate measurement. Expanded uncertainty uses $k = 2$.

Expanded measurement uncertainty uses a coverage factor of 2.

HPLC-01 · RP-HPLC with UV detection 1

Instrument: HPLC-UV

C18 column, 150 x 4.6 mm, 5 μ m; 0.1% formic acid in water/acetonitrile; 5 to 60% B over 15 min; 1.0 mL/min; 25 C; 214 nm; 10 μ L injection.

Trapezoidal integration against the declared baseline and windows.

Simple acceptance compares the result with the stated limits. Guard band acceptance requires the full expanded uncertainty interval to fall within the limits; overlap is indeterminate. A failed specification remains a reportable result.

Scope and observations

Neutral 1:1 copper complex reference, net formal charge 0. Copper-free GHK and cationic prezatide copper have different formulas and masses. Sample complex stoichiometry and protonation are not confirmed. Reference form: Neutral 1:1 GHK-Cu reference complex. Reference formula source: [PubChem CID 165429100](#).

Only the listed methods are covered. This report does not establish sterility, endotoxin content, biological activity or suitability for clinical use.

Sample reference: Catalog identity and nominal content supplied by the client.

Chemical form: Chemical form and sequence require a laboratory reference.
